AI Readiness Assesement

AI Readiness Assessment

Finance processes in scope

Assessed across six readiness dimensions

What we look at and why

What we assess

- Data & process maturity: consistency, standardisation, days-to-close
- Technology fit: ERP/API readiness, system & media breaks, cloud vs. on-prem
- People & governance: skills, change appetite, GDPR & audit trail

Why it matters

- Shows where AI adds value fast: and where foundations come first
- De-risks investment by sequencing quick wins before larger build-outs
- Builds one fact-based baseline shared

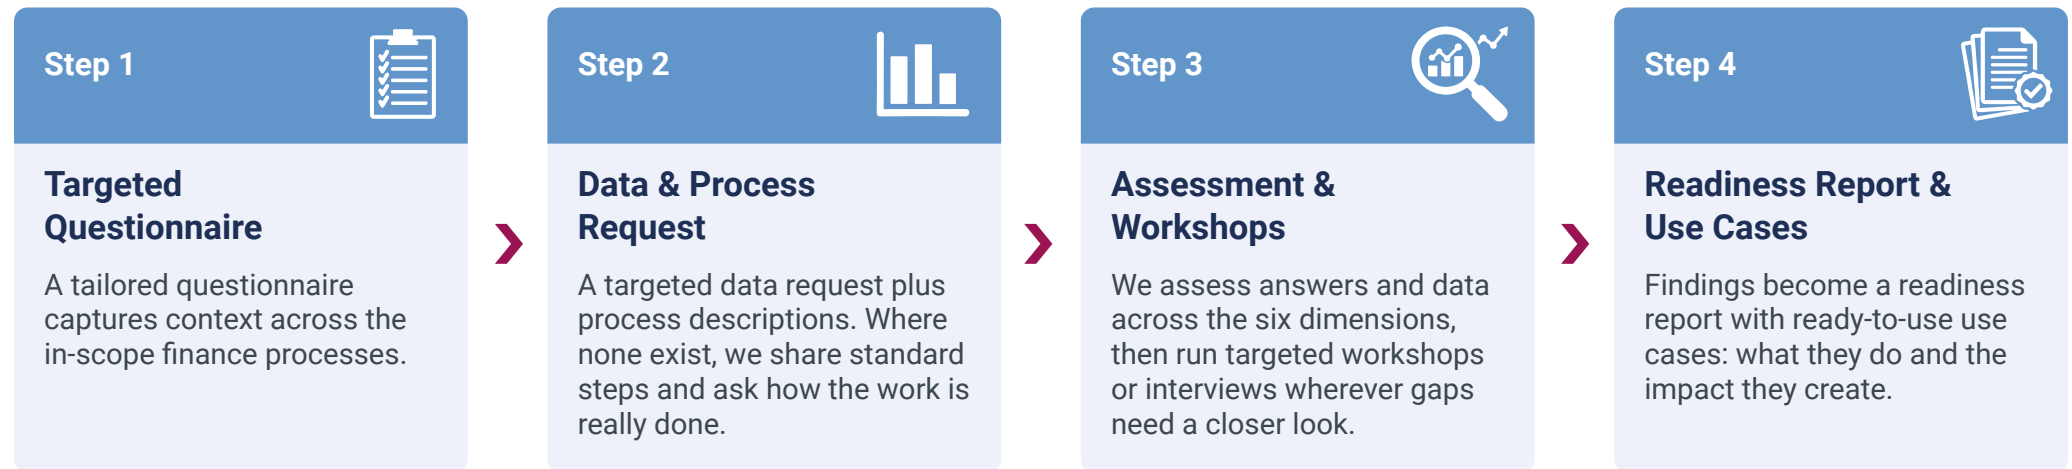

Output

Use cases & Process Mapping

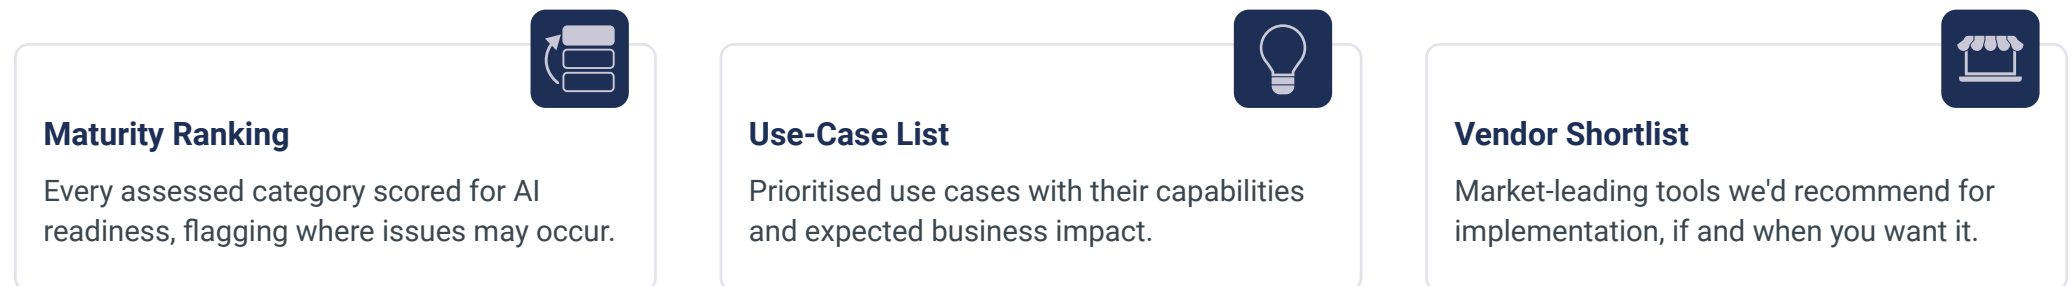

Building on the readiness baseline, we run focused workshops to map concrete AI use cases for each process (R2R, P2P, O2C) and recommend what to automate first: Turning the assessment into a prioritised, vendor-independent automation roadmap.

- Workshop-based use-case mapping per process
- Vendor-independent tool recommendations, prioritised by impact & readiness

Our Assessment Approach

Your Deliverables

Starten Sie Ihre AI-Transformation im Finance-Bereich

Wir unterstützen Sie mit unserer Expertise.
